Personal Statement

Issues around money, saving, and financial honesty profoundly impact people's lives, and yet we are often hesitant to discuss our related feelings. I find that my client's relationship with money and finances is just as important as their relationships with other people, and that it has a direct effect on their life satisfaction. I

help individuals and couples in their attempts to build healthier relationships by encouraging and facilitating honest, transparent conversations around money, hopes, and desire. Once we understand the basis of our internalized ideas about money, we can make changes to maximize the positive effect of our resources on the quality of our lives and relationships.
